

`Object.is(a, b)`判断两个数是否完全相等 ===

`Object.is([], [])`, `[] === []`; //数组是引用类型，两个[]的地址不一样

`Object.assign({a:'a'}, {b:'b'})` //浅拷贝

结果`Object {a: "a", b: "b"}`

```
let test = {k:123,o:456};
```

```
  for(let [key,value] of Object.entries(test)){
```

```
    console.log([key,value]);
```

```
  }
```

```
["k", 123]
```

```
["o", 456]
```
